

## STEP 4:

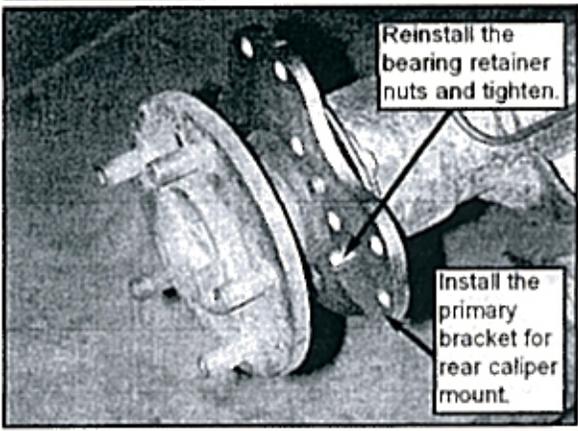

### Installation of disc brake components:

1. Now install the axle spacer plate followed by the axle. (The spacer plate will take the place of the backing plate.)

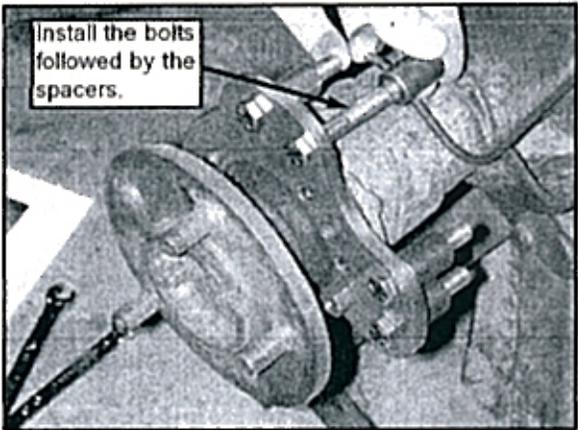

Install the spacer plate in between the axle housing and the bearing retainer.

2. Install the primary bracket so that the calipers will be mounted up and toward the rear of the car.

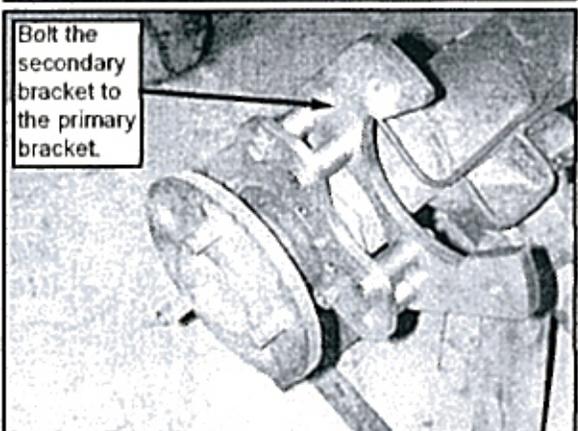

Reinstall the bearing retainer nuts and tighten.

3. Now reinstall and tighten the bearing retainer nuts.

Install the primary bracket for rear caliper mount.

4. Take the supplied bolts, and install those on the primary bracket. Then use the spacers, that are also provided, and install those onto the bolts.

Install the bolts followed by the spacers.

5. Bolt the secondary bracket to the primary bracket and tighten the nylock nuts.

Bolt the secondary bracket to the primary bracket.
