

MOPARLEO'S REMANUFACTURED

MOPAR FRONT DOOR HINGES

PAINT WARNING

Your remanufactured Mopar door hinges have been painted with an Automotive grade of primer. This is not a long term protective coating. It is intended only to prevent light surface rust before being painted with the cars' body color/final paint finish.

This primer is made by Rust-oleum and is compatible with Lacquer and Enamel paints. Your hinges have also been pre-lubed with Tef-lon.

We recommend the use of dry type lubricants. These do not attract dirt and debris which will eventually cause the hinge parts to stop operating smoothly and shorten the proper function and life of the moving parts.

Please mask off the rollers before painting to prevent them from binding/sticking. This will affect their function and shorten the life of your hinges. Also they should be painted on the car, body color. Best not to paint the mounting surfaces of the hinges for a tighter fit.

Thank you for your business and feel free to contact us with any questions that you may have about your hinges.
