

An open pattern that appears richer with the metallic flakes less noticeable.

A closed pattern is best matched by reducing the DDL color 150% with DTL-135 Acrylic Thinner, or equivalent, adjusting the air pressure at the gun to 35 lbs. and applying medium wet coats.

An open pattern is achieved by lowering the air pressure to 20-30 lbs. at the gun, reducing the DDL color 100% with a blend of DTL-135 and DTX-1140 Retarder, or equivalent, and applying even wet coats.

The blending of thinner and retarder can be varied in percentage as necessary depending on the room temperature.

Compounding Color Coats

Compound the sanded area that extends around the refinish lacquer and then compound the lacquer, blending it into the enamel. **The hard surface of the acrylic enamel will permit compounding without leaving scratches.**
